

Title: Sales Summary using SQLite & Python

Subtitle: Internship Task 7

: Objective

Learn how to connect Python with SQLite

Run basic SQL queries

Display sales summary using print and bar chart

Practice SQL + Pandas + Matplotlib together

: Tools & Technologies

Python 3.x

SQLite3 (Built-in in Python)

Pandas

Matplotlib

Jupyter Notebook / .py Script

: Database & Table Used

Database: sales_data.db

Table: sales

Fields:

product (TEXT)

quantity (INTEGER)

price (REAL)

: SQL Query Used

```
SELECT product,  
       SUM(quantity) AS total_qty,  
       SUM(quantity * price) AS revenue  
FROM sales  
GROUP BY product;
```

: Python Code Snippet

```
conn = sqlite3.connect("sales_data.db")  
query = """SELECT product, SUM(quantity) AS total_qty,  
           SUM(quantity * price) AS revenue FROM sales GROUP BY product"""  
df = pd.read_sql_query(query, conn)  
print(df)
```

: Bar Chart Output

Title: Revenue by Product

: Summary & Learnings

Connected Python with SQLite successfully

Retrieved data using SQL inside Python

Used pandas for data handling

Visualized sales data using matplotlib

Understood importance of SQL + Python in analytics

Thank you
